Chapter One | Introduction

1.1 Objective

The objective of the Software Design Document for “Smart prescription application” both Android mobile application and web application are to provide a description and explain of the design system including activity following requirements specification and before programming. This document is based on the project proposal, project plan and software requirement specification and help developers to understand how to work for this application.

1.2 Project Scope

Smart prescription application consists of a web application and a mobile application. Smart prescription application requires a web application for creating a patient’s profile and allergy report by a doctor and the Smart prescription application require a mobile application to generate and scan the QR code on a mobile phone by a pharmacist.

The features of the web application consist of:

Feature#1: Prescription system

Feature#2: Account management system

Feature#3: Authentication system

Feature#5: Report allergy system

Feature#6: Allergy drug summary report system

The features of the mobile application consist of:

Feature#4: Prescription verification system

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	5
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

Chapter Two | Overall Description

2.1 Product Perspective

Smart prescription application can create the prescription of the patient in form of QR code that creates by a doctor. Smart prescription application requires a mobile application for scan QR code by the pharmacist. Pharmacist can get the prescription of patient with the detail of drug on a mobile application.

Smart prescription application can also record the history of allergy drug of patient and report to the Food and Drug Administration, Ministry of Public Health organization or (FDA) for observing unusually allergy drug that has been found in Thailand.

2.2 Product Features

From the architecture of our project with schedule we separated the whole project of develops application according to this. The description is shown below:

- Feature#1: Prescription system
- Feature#2: Account management system
- Feature#3: Authentication system
- Feature#4: Verification system
- Feature#5: Allergy report system
- Feature#6: Summary allergy report system

2.3 User Classes and Characteristics

The intended users for this application. The doctor have to know about using basic of web application. The pharmacists have to know basic of how to use android application to scan QR code to export the information of patient's profile.

2.4 Operation Environment

- Internet
- Laptops
 1. Dell inspiron 5220
 - Processor: Intel Core i5 3210M (3.1 GHz)
 - Processor Memory: 8GB DDR3
 - Memory Hard Disk: 1000GB
 - Operating System: Window 7 Home Basic
 2. Asus X550DP-DS101
 - AMD A-Series A10-5750M (2.50GHz) 8GB
 - Memory 1TB
 - HDD AMD Radeon
 - Windows 8 64-Bit
- Mobile phone: Android Operating System with camera
 1. Asus zenfone 4.5
 - Android 4.4.2 (KitKat)
 - Processor: Intel Atom Z2520DualCore
 - CPU Speed: 1.2 GHz
 - Memory 8GB (Internal)
 - RAM 1GB
 2. Samsung galaxy J7
 - OS: Android OS, v5.1 (Lollipop)
 - Processor: Quad-core 1.4 GHz Cortex-A53 & quad-core 1.0 GHz Cortex-A53
 - Octa-core 1.5 GHz
 - Memories 16 GB, 1.5 GB RAM 8GB (Internal)

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	6

Chapter Three | Functional Requirement

3.1 User Requirement Specification

Feature #1 Prescription system

URS-01: Doctors can view a doctor home page on the web application.

URS-02: Doctors can create a patient's profile on the web application by inputting personal id, name, surname, prescription and username.

URS-03: Doctors can update a patient's profile on the web application by application by input personal id, name, surname, prescription and username.

URS-04: Doctors can delete a patient's profile on the web application.

URS-05: Doctors can search patient's profiles on the web application by using personal id, name, or surname.

URS-06: Doctors can view a patient's profile on the web application.

URS-07: Doctors can view list of patient's profiles on the web application.

Feature #2 Account management system

URS-08: Administrators can view an admin home page on the web application.

URS-09: Administrators can create a user's profile on the web application by inputting name, surname, username, password, confirm-password and position.

URS-10: Administrators can update a user's profile on the web application by inputting name, surname, username, password, confirm-password and position.

URS-11: Administrators can delete a user's profile on the web application.

URS-12: Administrators can search a user's profile on the web application by using name, surname, or username.

URS-13: Administrators can view a user's profile on the web application.

URS-14: Administrators can view list of user's profile on the web application.

Feature #3 Authentication system

URS-15: Doctors, Administrations, and FDAs can login to the web application by using username and password.

URS-16: Doctors, Administrations, and FDAs can logout from the web application.

URS-17: Patients can login to the mobile application by using username and password.

URS-18: Patients can logout from the mobile application.

Feature#4 Verification system

URS-19: Patients can view the QR code on the mobile application.

URS-20: Pharmacists can scan the QR code on the mobile application.

URS-21: Pharmacists can add the time of dispensation to the patient's profile on the mobile application.

Feature#5 Allergy report system

URS-01: Doctors can view a doctor home page on the web application.

URS-22: Doctors can create an allergy report on the web application by inputting personal id, name, surname, and allergy drug.

URS-23: Doctors can update an allergy report on the web application by inputting personal id, name, surname, and allergy drug.

URS-24: Doctors can delete an allergy report on the web application.

URS-25: Doctors can search an allergy report on the web application by using personal id, name, or surname.

URS-26: Doctors can view an allergy drug report on the web application.

URS-27: Doctors can view list of allergy drug reports on the web application.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	7
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

Feature#6 Summary allergy report system

URS-28: FDAs can view a FDA home page on the web application.

URS-29: FDAs can view an allergy report on the web application.

URS-30: FDAs can view list of allergy reports on the web application.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	8
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

3.2 User Requirement Specification with the Software Requirement Specification

URS-01: Doctors can view a doctor home page on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-002: The system shall provide patient options menu box (create patient and manage patient) and allergy options menu box (create allergy report and manage allergy reports).

SRS-003: The system shall display information of current doctor which includes position, name, surname and username.

URS-02: Doctors can create a patient's profile on the web application by inputting personal id, name, surname, prescription and username.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-005: The system shall provide patient create form for input information which includes personal ID, name, surname, prescription, and username.

SRS-006: The system shall display error message "Personal ID cannot be blank." when doctors do not input personal ID.

SRS-007: The system shall display error message "Personal ID has already been exist." when doctors input personal ID that exist in the database.

SRS-008: The system shall display error message "Personal ID is invalid" when doctors input wrong personal Id.

SRS-009: The system shall display error message "Name cannot be blank." when doctors do not input name.

SRS-010: The system shall display error message "Surname cannot be blank." when doctors do not input surname.

SRS-011: The system shall display error message "Prescription cannot be blank." when doctors do not input prescription.

SRS-012: The system shall display error message "Username cannot be blank." when doctors do not input username.

SRS-013: The system shall display error message "Username has already been taken. Please change." when doctors input username that repeated with the database.

SRS-014: The system shall display error message "Name is invalid." when doctors input name with not a letter on English language.

SRS-015: The system shall display error message "Surname is invalid." when doctors input surname with not a letter on English language.

SRS-016: The system shall provide a 'Create' button for creating patient's profiles.

SRS-113: The system shall validate personal id, name, surname, prescription, and username by Ajax validation.

SRS-017: The system shall generate the password to a patient's profile, which is 5 digits number.

SRS-018: The system shall store date time of creating profile into the database when doctors click 'Create' button.

SRS-019: The system shall store id of doctor into the database for responsible when doctors click 'Create' button

SRS-020: The system shall save data of patient's profiles to database when doctors click a 'Create' button and redirect user to patient's profile UI.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	9
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-03: Doctors can update a patient's profile on the web application by inputting personal id, name, surname, prescription and username.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-022: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, responsible, create date and options.)

SRS-023: The system shall provide 'Update' button () in the options column of table.

SRS-024: The system shall retrieve patient's profiles from database.

SRS-025: The system shall provide patient update profiles form that has default information (personal ID, name, surname, prescription, and username).

SRS-006: The system shall display error message "Personal ID cannot be blank." when doctors do not input personal ID.

SRS-007: The system shall display error message "Personal ID has already been exist." when doctors input personal ID that exist in the database.

SRS-008: The system shall display error message "Personal ID is invalid" when doctors input wrong personal Id.

SRS-009: The system shall display error message "Name cannot be blank." when doctors do not input name.

SRS-010: The system shall display error message "Surname cannot be blank." when doctors do not input surname.

SRS-011: The system shall display error message "Prescription cannot be blank." when doctors do not input prescription.

SRS-012: The system shall display error message "Username cannot be blank." when doctors do not input username.

SRS-013: The system shall display error message "Username has already been taken. Please change." when doctors input username that repeated with the database.

SRS-014: The system shall display error message "Name is invalid." when doctors input name with not a letter on English language.

SRS-015: The system shall display error message "Surname is invalid." when doctors input surname with not a letter on English language.

SRS-026: The system shall provide a 'Update' button for updating patient's profiles.

SRS-113: The system shall validate personal id, name, surname, prescription, and username by Ajax validation.

SRS-027: The system shall store date time of updating profile into the database when doctors click 'Update' button.

SRS-028: The system shall store id of doctor into the database for responsible when doctors click 'Update' button

SRS-029: The system shall save a new data of patient's profiles to database when doctors click 'Update' button and redirect user to patient's profile UI.

SRS-030: The system shall display the message to show the number and total amount of patient's profiles.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	10
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-04: Doctors can delete a patient's profile on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-022: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, responsible, create date and options.)

SRS-031: The system shall provide 'Delete' button () in the options column of table.

SRS-024: The system shall retrieve patient's profiles from database.

SRS-032: The system shall interface to show the confirm box "Are you sure you want to delete this item?" when doctors click 'Delete' button on the web application.

SRS-033: The system shall be able to delete a patient's profiles from the database when doctors click 'OK' button on the confirm box.

SRS-034: The system shall be not able to delete a patient's profiles from the database when doctors click 'Cancel' button.

SRS-030: The system shall display the message to show the number and total amount of patient's profiles.

URS-05: Doctors can search a patient's profile on the web application by using personal id, name, or surname.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-022: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, responsible, create date and options.)

SRS-024: The system shall retrieve patient's profiles from database.

SRS-114: The system shall validate input data by Ajax validation.

SRS-035: The system shall display the message "*No results found*", when the data that input does not exist in the database.

SRS-036: The system shall display the patient's information on the table, when searching found the match letters exist in the database.

SRS-030: The system shall display the message to show the number and total amount of patient's profiles.

URS-06: Doctors can view a patient's profile on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-022: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, responsible, create date and options.)

SRS-037: The system shall provide 'View' button () in the options column of table.

SRS-024: The system shall retrieve patient's profiles from database.

SRS-038: The system shall provide the patient's profiles UI, which includes personal ID, name, surname, prescription, responsible, username, password, create date and update date of patient's profiles.

SRS-039: The system shall provide the 'Update' button and 'Delete' button.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	11
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-07: Doctors can view a list of patient's profile on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-022: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, responsible, create date and options.)

SRS-030: The system shall display the message to show the number and total amount of patient's profiles.

URS-08: Administrators can view an admin home page on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-040: The system shall provide user options menu box (create user and manage user).

SRS-041: The system shall display information of current admin which includes position, name, surname and username.

URS-09: Administrators can create a user's profile on the web application by inputting name, surname, username, password, confirm-password and position.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-042: The system shall provide user's profiles form for input information which include name, surname, username, password, confirm-password and select points of position (Administrator, Doctor, and FDA).

SRS-043: The system shall display error message "Name cannot be blank." when admins do not input name.

SRS-044: The system shall display error message "Surname cannot be blank." when admins do not input surname.

SRS-045: The system shall display error message "Username cannot be blank." when admins do not input username.

SRS-046: The system shall display error message "Username has already been taken. Please change." when admins input username that repeated with the database.

SRS-115: The system shall display error message "Password cannot be blank." when admins does not input password.

SRS-116: The system shall display error message "Confirm-Password cannot be blank." when admins does not input confirm-password.

SRS-047: The system shall display error message "Password and Confirm-Password do not Match, Please try again." when admins input password and confirm-password do not match.

SRS-048: The system shall display error message "Name is invalid." when admins input name with not a letter on English language.

SRS-049: The system shall display error message "Surname is invalid." when admins input surname with not a letter on English language.

SRS-050: The system shall display error message "Position cannot be blank." when admins do not select the position.

SRS-051: The system shall provide a 'Create' button for creating user's profile.

SRS-111: The system shall validate name, surname, username, password, confirm-password and position by Ajax validation.

SRS-052: The system shall save data of user's profiles to database when admins click a 'Create' button and redirect user to user's profile UI.

URS-10: Administrators can update a user's profile on the web application by inputting name, surname, username, password, confirm-password and position.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage user page, which includes create button, search text field, search button.

SRS-054: The system shall provide the table lists of user which include six columns (no., position, name, surname, username and options.)

SRS-023: The system shall provide 'Update' button () in the options column of table.

SRS-055: The system shall retrieve user's profiles from database.

SRS-056: The system shall provide user update form that has default information (name, surname, username, password, confirm-password and position).

SRS-043: The system shall display error message "Name cannot be blank." when admins do not input name.

SRS-044: The system shall display error message "Surname cannot be blank." when admins do not input surname.

SRS-045: The system shall display error message "Username cannot be blank." when admins do not input username.

SRS-046: The system shall display error message "Username has already been taken. Please change." when admins input username that repeated with the database.

SRS-115: The system shall display error message "Password cannot be blank." when admins does not input password.

SRS-116: The system shall display error message "Confirm-Password cannot be blank." when admins does not input confirm-password.

SRS-047: The system shall display error message "Password and Confirm-Password do not Match, Please try again." when admins input password and confirm-password do not match.

SRS-048: The system shall display error message "Name is invalid." when admins input name with not a letter on English language.

SRS-049: The system shall display error message "Surname is invalid." when admins input surname with not a letter on English language.

SRS-050: The system shall display error message "Position cannot be blank." when admins do not select the position.

SRS-057: The system shall provide a 'Update' button for updating user's profiles.

SRS-111: The system shall validate name, surname, username, password, confirm-password and position by Ajax validation.

SRS-058: The system shall save a new data of user's profiles to database when admins click 'Update' button and redirect user to user's profile UI.

SRS-059: The system shall display the message to show the number and total amount of user's profiles.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	13
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-11: Administrators can delete a user's profile on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage user page, which includes create button, search text field, search button.

SRS-054: The system shall provide the table lists of user which include six columns (no., position, name, surname, username and options.)

SRS-031: The system shall provide 'Delete' button () in the options column of table.

SRS-055: The system shall retrieve user's profiles from database.

SRS-060: The system shall interface to show the confirm box "Are you sure you want to delete this item?" when admins click 'Delete' button on the web application.

SRS-061: The system shall be able to delete a user's profiles from the database when admins click 'OK' button on the confirm box.

SRS-062: The system shall be not able to delete a user's profiles from the database when admins click 'Cancel' button.

SRS-059: The system shall display the message to show the number and total amount of user's profiles.

URS-12: Administrations can search a user's profile on the web application by using name, surname, or username.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage user page, which includes create button, search text field, search button.

SRS-054: The system shall provide the table lists of user which include six columns (no., position, name, surname, username, and options.)

SRS-055: The system shall retrieve user's profiles from database.

SRS-114: The system shall validate input data by Ajax validation.

SRS-035: The system shall display the message "*No results found*", when the data that input does not exist in the database.

SRS-063: The system shall display the user's information on the table, when searching found the match letters exist in the database.

SRS-059: The system shall display the message to show the number and total amount of user's profiles.

URS -13: Administrations can view a user's profile on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage user page, which includes create button, search text field, search button.

SRS-054: The system shall provide the table lists of user which include six columns (no., position, name, surname, username, and options.)

SRS-055: The system shall retrieve user's profiles from database.

SRS-037: The system shall provide 'View' button () in the options column of table.

SRS-064: The system shall provide the user's profiles page, which includes Id, name, surname, username, password, confirm-password and position.

SRS-039: The system shall provide the 'Update' button and 'Delete' button.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	14
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-14: Administrations can view a list of user's profile on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-054: The system shall provide the table lists of user which include six columns (no., position, name, surname, username, and options.)

SRS-059: The system shall display the message to show the number and total amount of user's profiles.

URS-15: Doctors, Administrations, and FDAs can login to the web application.

SRS-117: The system shall provide menu bars (home, and login).

SRS-065: The system shall provide the login form, to receive username and password.

SRS-068: The system shall validate username and password from database.

SRS-069: The system shall provide 'Login' button for login to the web application.

SRS-070: The system shall displays error message "Username cannot be blank." when user do not input username.

SRS-071: The system shall displays error message "Password cannot be blank." when user do not input password.

SRS-072: The system shall displays error box message "Username is incorrect!" when username does not exist in the database.

SRS-073: The system shall displays error box message "Password is incorrect!" when password does not exist in the database.

SRS-074: The system shall redirect user to particular home page if users login success.

URS-16: Doctors, Administrations, and FDAs can logout from the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-075: The system shall redirect users to main page if users click logout button.

URS-17: Patients can login to the mobile application.

SRS-076: The system shall provide the login form, to receive username and password.

SRS-077: The system shall validate username and password from database.

SRS-078: The system shall provide 'login' button for login to the mobile application.

SRS-079: The system shall display message "Incorrect username or password" if username or password is incorrect.

SRS-066: The system displays the alert message "Cannot be blank" if users do not input the username and password on the login form.

SRS-067: The system shall redirect user to the main page if user login success.

URS-18: Patients can logout from the mobile application.

SRS-080: The system shall provide "logout" button on the main page.

SRS-081: The system shall redirect users to the login page if users click 'logout' button.

URS-19: Patients can view the QR code on the mobile application.

SRS-082: The system shall provide the QR code page, which includes exit button and "Show QR code" button.

SRS-083: The system shall generate the QR code after select "Show QR code" button.

SRS-084: The system shall display the QR code to patient.

URS-20: Pharmacists can scan the QR code on the mobile application.

SRS-085: The system shall provide the scan QR button for open the scan QR function.

SRS-086: The system shall scan QR code on the mobile application.

SRS-087: The system shall provide the information of patient after scan QR code completed.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	15
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-21: Pharmacists can add the time of dispensation to patient's profile on the mobile application.

SRS-088: The system shall provide 'confirm' button for specify prescription.

SRS-089: The system shall display message "Successful" after select "confirm" button.

SRS-090: The system shall record the current time to the patient's profile.

URS-22: Doctors can create an allergy report on the web application by inputting personal id, name, surname, and allergy drug.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-091: The system shall provide allergy report create form for input information which includes personal ID, name, surname, and allergy drug.

SRS-006: The system shall display error message "Personal ID cannot be blank." when doctors do not input personal ID.

SRS-007: The system shall display error message "Personal ID has already been exist." when doctors input personal ID that exist in the database.

SRS-008: The system shall display error message "Personal ID is invalid" when doctors input wrong personal Id.

SRS-009: The system shall display error message "Name cannot be blank." when doctors do not input name.

SRS-010: The system shall display error message "Surname cannot be blank." when doctors do not input surname.

SRS-092: The system shall display error message "Allergy Drug cannot be blank." when doctors do not input allergy drug.

SRS-014: The system shall display error message "Name is invalid." when doctors input name with not a letter on English language.

SRS-015: The system shall display error message "Surname is invalid." when doctors input surname with not a letter on English language.

SRS-093: The system shall provide a 'Create' button for creating allergy report.

SRS-108: The system shall validate personal ID, name, surname, and allergy drug by Ajax validation.

SRS-094: The system shall store date time of creating report into the database when doctors click 'Create' button.

SRS-095: The system shall store id of doctor into the database for reporter when doctors click 'Create' button

SRS-096: The system shall save data of allergy report to database when doctors click a 'Create' button and redirect user to allergy report UI.

URS-23: Doctors can update an allergy report on the web application by inputting personal id, name, surname, and allergy drug.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage allergy report page, which includes create button, search text field, search button.

SRS-053: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-023: The system shall provide 'Update' button () in the options column of table.

SRS-097: The system shall retrieve allergy report from database.

SRS-098: The system shall provide allergy report update form that has default information (personal ID, name, surname, and allergy drug).

SRS-006: The system shall display error message "Personal ID cannot be blank." when doctors do not input personal ID.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	16
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

SRS-007: The system shall display error message “Personal ID has already been exist.” when doctors input personal ID that exist in the database.

SRS-008: The system shall display error message “Personal ID is invalid” when doctors input wrong personal Id.

SRS-009: The system shall display error message “Name cannot be blank.” when doctors do not input name.

SRS-010: The system shall display error message “Surname cannot be blank.” when doctors do not input surname.

SRS-092: The system shall display error message “Allergy Drug cannot be blank.” when doctors do not input allergy drug.

SRS-014: The system shall display error message “Name is invalid.” when doctors input name with not a letter on English language.

SRS-015: The system shall display error message “Surname is invalid.” when doctors input surname with not a letter on English language.

SRS-099: The system shall provide a ‘Update’ button for updating allergy report.

SRS-108: The system shall validate personal ID, name, surname, and allergy drug by Ajax validation.

SRS-100: The system shall store date time of updating profile into the database when doctors click ‘Update’ button.

SRS-101: The system shall store id of doctor into the database for reporter when doctors click ‘Update’ button

SRS-102: The system shall save a new data of allergy report to database when doctors click ‘Update’ button and redirect user to allergy report page.

SRS-103: The system shall display the message to show the number and total amount of allergy reports.

URS-24: Doctors can delete an allergy report on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage allergy report page, which includes create button, search text field, search button.

SRS-053: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-031: The system shall provide ‘Delete’ button () in the options column of table.

SRS-097: The system shall retrieves allergy report from database.

SRS-104: The system shall interface to show the confirm box “Are you sure you want to delete this item?” when doctors click ‘Delete’ button on the web application.

SRS-105: The system shall be able to delete an allergy report from the database when doctors click ‘OK’ button on the confirm box.

SRS-106: The system shall be not able to delete an allergy report from the database when doctors click ‘Cancel’ button.

SRS-103: The system shall display the message to show the number and total amount of allergy reports.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	17
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-25: Doctors can search allergy reports on a web application by using personal id, name, or surname.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage page, which includes create button, search text field, search button.

SRS-053: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-097: The system shall retrieves allergy report from database.

SRS-114: The system shall validate input data by Ajax validation.

SRS-035: The system shall display the message “*No results found*”, when the data that input does not exist in the database.

SRS-107: The system shall display the user’s information on the table, when searching found the match letters exist in the database.

SRS-103: The system shall display the message to show the number and total amount of allergy reports.

URS-26: Doctors can view an allergy report on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage allergy report page, which includes create button, search text field, search button.

SRS-053: The system shall provide the table lists of allergy report which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-037: The system shall provide ‘View’ button () in the options column of table.

SRS-097: The system shall retrieve allergy report from database.

SRS-043: The system shall provide the allergy report page, which includes allergy ID, personal ID, name, surname, allergy drug, reporter create date and update date.

SRS-039: The system shall provide the ‘Update’ button and ‘Delete’ button.

URS-27: Doctors can view list of allergy reports on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-021: The system shall provide the manage allergy report page, which includes create button, search text field, search button.

SRS-053: The system shall provide the table lists of patient which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-103: The system shall display the message of the number and total amount of allergy reports.

URS-28: FDA can view a FDA home page on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-109: The system shall provide allergy options menu box (view reports list).

SRS-110: The system shall display information of current FDA which includes position, name, surname and username.

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	18
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

URS-29: FDA can view an allergy report on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-053: The system shall provide the table lists of allergy report which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-037: The system shall provide 'View' button () in the options column of table.

SRS-097: The system shall retrieve allergy report from database.

SRS-043: The system shall provide the allergy report UI, which includes allergy ID, personal ID, name, surname, allergy drug, reporter create date and update date.

URS-30: FDAs can view list of allergy reports on the web application.

SRS-001: The system shall provide menu bars (home, and logout).

SRS-004: The system shall provide the breadcrumb link.

SRS-112: The system shall provide the list of allergy report page,

SRS-053: The system shall provide the table lists of allergy report which include seven columns (no., personal ID, name, surname, reporter, create date and options.)

SRS-103: The system shall display the message to show the number and total amount of allergy reports.

Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

4.2 Use Case Description

4.2.1 Feature#1: Prescription system

UC-01: Doctor can view a doctor home page on the web application.

Use Case ID	UC-01
Use Case Name:	Doctor can view a doctor home page on the web application.
Actor:	Doctors
Description:	Doctors can view a doctor home page on the web application after login successful.
Trigger:	Doctor log in to the web application by using the doctor's side.
Pre-conditions:	1. Administration already created the doctor profile. 2. Doctors already login to the web application.
Post-condition:	Doctor can view the information of doctor's profile on home page.
Normal Flows:	1. System provide the information of doctor's profile on the home page which include position, name, surname and username.

Activity Diagram :(AD-01):

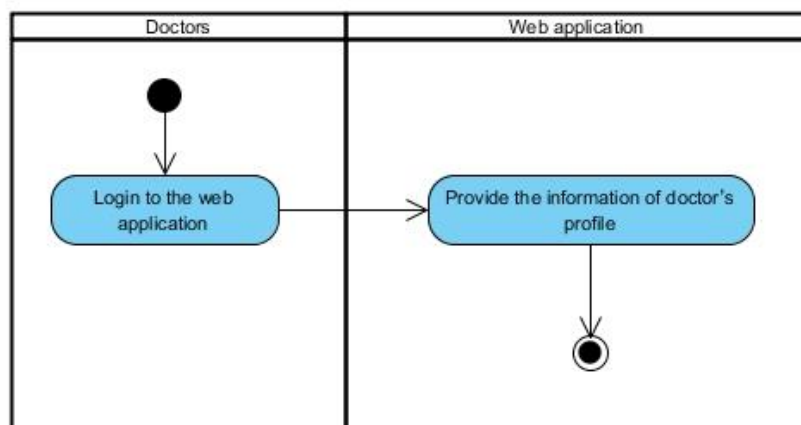

Figure-8: Activity Diagram AD-01

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	25
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

UC-02: Doctors can create a patient's profile on the web application by inputting personal id, name, surname, prescription and username.

Use Case ID		UC-02	
Use Case Name:		Doctors can create a patient’s profile on the web application by inputting personal id, name, surname, prescription and username.	
Actor:		Doctors	
Description:		Doctors create a patient’s profile on the web application by inputting personal id, name, surname, prescription and username.	
Trigger:		Doctors select ‘Create’ button.	
Pre-conditions:		Doctor log in to the web application by using the doctor’s side.	
Post-condition:		System displays the patient’s profile on the list of patient’s profile.	
Use case input			
Input	Type	Constraints	Example of information
personal ID	Int	Number 13 digits	1600100485726
name	String	Alphabet 30 digits	Natthakan
surname	String	Alphabet 30 digits	Kaeokanpai
prescription	String	String of Alphabet or number or symbol 300 digits	Paracetamol 5 mg.
username	String	Alphabet or number 20 digits	Up2man
Normal Flows:		1. Doctors input the information to the patient’s profile form which includes personal id, name, surname, prescription and username. 2. Doctors select ‘Create’ button. 3. System verifies the patient create form. 4. System generates a password to the patient’s profile. 5. System stores name of doctor and create date time to the database. 6. System creates the patient’s profile to the database. 7. System displays the patient’s profile on the screen.	
Alternative Flows:		3(A). 1. If doctors did not input the personal id field. 2. System displays error message “Personal ID cannot be blank”. 3. System works on the 7 th step of normal flows. 3(B). 1. If doctors input the personal id of the patient’s profile that already exist in the database. 2. System displays error message “Personal ID has already been exist”. 3. System works on the 7 th step of normal flows. 3(C). 1. If doctors input the personal id that not follow by the constraints on the table. 2. System displays error message “Personal ID is invalid”. 3. System works on the 7 th step of normal flows. 3(D). 1. If doctors did not input the name field. 2. System displays error message “Name cannot be blank”. 3. System works on the 7 th step of normal flows. 3(E). 1. If doctors did not input the surname field. 2. System displays error message “Surname cannot be blank”.	

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	26
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

	<p>3. System works on the 7th step of normal flows.</p> <p>3(F).</p> <ol style="list-style-type: none"> 1. If doctors did not input the prescription field. 2. System displays error message “Prescription cannot be blank”. 3. System works on the 7th step of normal flows. <p>3(G).</p> <ol style="list-style-type: none"> 1. If doctors did not input the username d field. 2. System displays error message “Username cannot be blank”. 3. System works on the 7th step of normal flows. <p>3(H).</p> <ol style="list-style-type: none"> 1. If doctors input the username of the patient’s profile that already exist in the database. 2. System displays error message “Username has already been taken. Please change”. 3. System works on the 7th step of normal flows. <p>3(I).</p> <ol style="list-style-type: none"> 1. If doctors input the name not follow by the constraints on the table. 2. System displays error message “Name is invalid”. 3. System works on the 7th step of normal flows. <p>3(J).</p> <ol style="list-style-type: none"> 1. If doctors input the surname not follow by the constraints on the table. 2. System displays error message “Surname is invalid”. 3. System works on the 7th step of normal flows.

Activity Diagram :(AD-02):

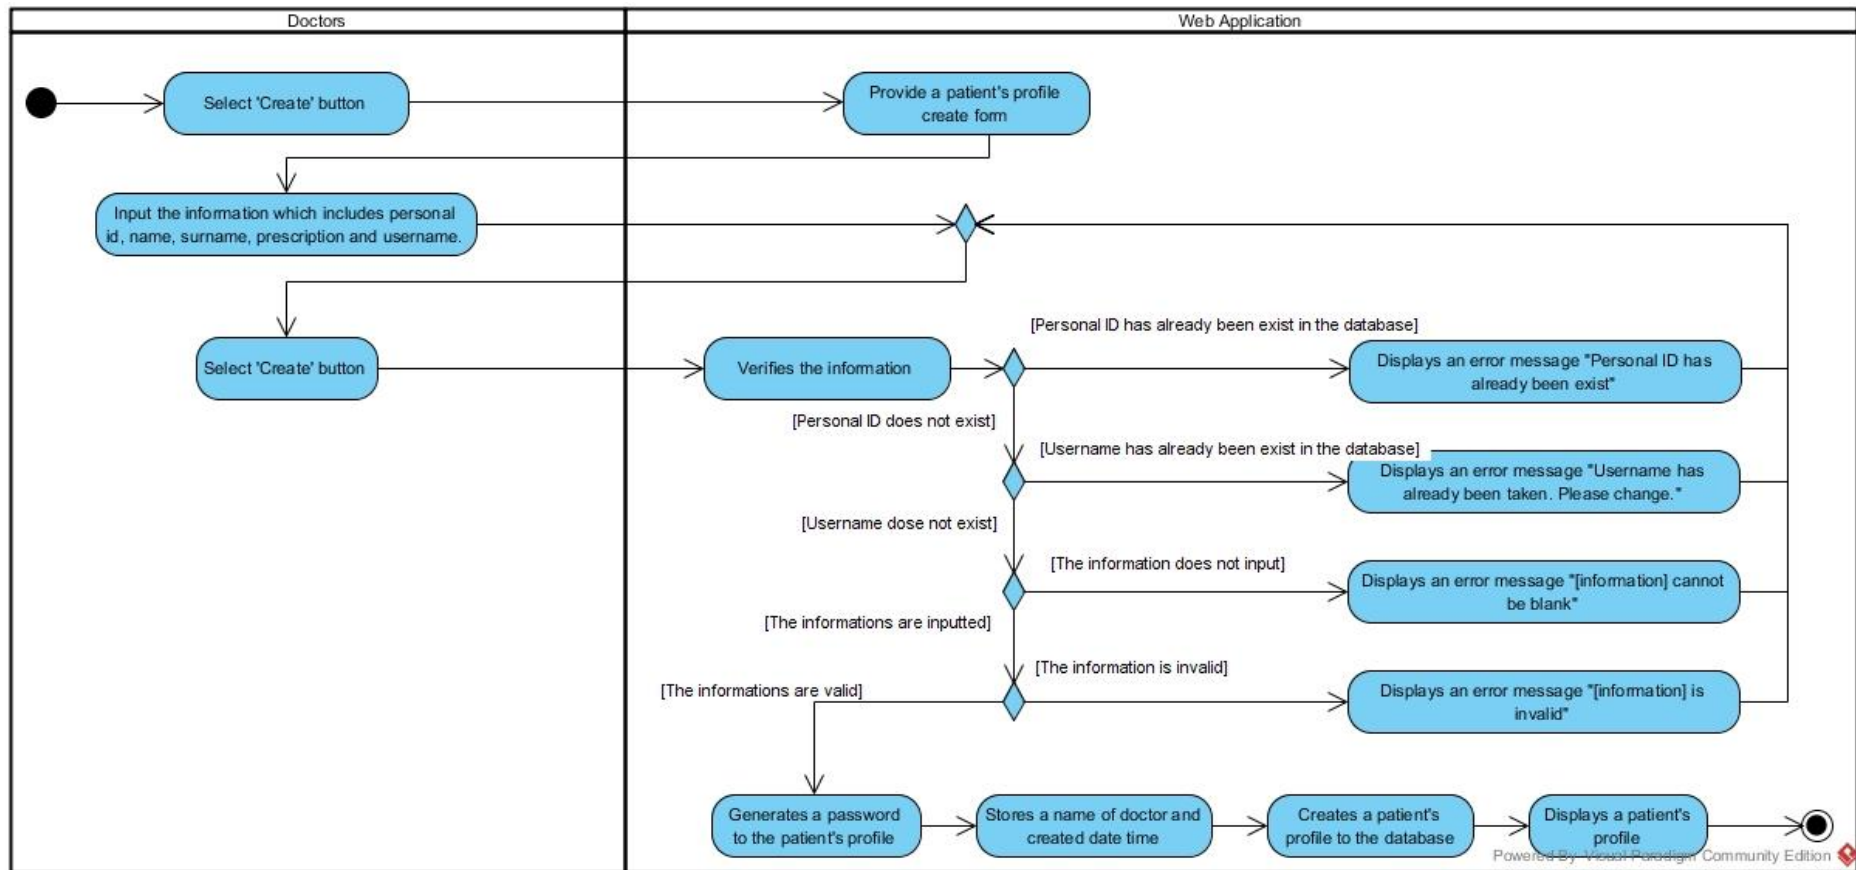

Figure-9: Activity Diagram AD-2

UC-03: Doctors can update a patient's profile on the web application by input the information on the patient's profile form.

Use Case ID		UC-03	
Use Case Name:		Doctors can update a patient’s profile on the web application by input the information on the patient’s profile form.	
Actor:		Doctors	
Description:		Doctors update a patient’s profile on the web application by input the information on the patient’s profile form.	
Trigger:		Doctors select ‘update’ button on the options column of table.	
Pre-conditions:		1. Doctors have to create a patient’s profile before updating. 2. Doctors access to manage patients page.	
Post-condition:		System displays the patient’s profile on the list of patient’s profile.	
Use case input			
Input	Type	Constraints	Example of information
personal ID	Int	Number 13 digits	1600100485726
Name	String	Alphabet 30 digits	Natthakan
Surname	String	Alphabet 30 digits	Kaeokanpai
prescription	String	String of Alphabet or number or symbol 300 digits	Parasetamol 5 mg.
username	String	Alphabet or number 20 digits	Up2man
Normal Flows:		1. Doctors input the information of patient on the patient’s profile form. 2. Doctors select ‘save’ button. 3. System verifies the patient update form. 4. System stores name of doctor and update date time to the database. 5. System updates the patient’s profile to the database. 6. System displays the patient’s profile on the screen.	
Alternative Flows:		3(A). 1. If doctors did not input the personal id field. 2. System displays error message “Personal ID cannot be blank”. 3. System works on the 6 th step of normal flows. 3(B). 1. If doctors input the personal id of the patient’s profile that already exist in the database. 2. System displays error message “Personal ID has already been exist”. 3. System works on the 6 th step of normal flows. 3(C). 1. If doctors input the personal id that not follow by the constraints on the table. 2. System displays error message “Personal ID is invalid”. 3. System works on the 6 th step of normal flows. 3(D). 1. If doctors did not input the name field. 2. System displays error message “Name cannot be blank”. 3. System works on the 6 th step of normal flows. 3(E). 1. If doctors did not input the surname field. 2. System displays error message “Surname cannot be blank”. 3. System works on the 6 th step of normal flows. 3(F).	

	<ol style="list-style-type: none"> 1. If doctors did not input the prescription field. 2. System displays error message “Prescription cannot be blank”. 3. System works on the 6th step of normal flows. <p>3(G).</p> <ol style="list-style-type: none"> 1. If doctors did not input the username d field. 2. System displays error message “Username cannot be blank”. 3. System works on the 6th step of normal flows. <p>3(H).</p> <ol style="list-style-type: none"> 1. If doctors input the username of the patient’s profile that already exist in the database. 2. System displays error message “Username has already been taken. Please change”. 3. Activity Diagram:(AD-03):

Figure-10: Activity Diagram AD-3

UC-4: Doctors can delete a patient's profile on the web application.

Use Case ID	UC-04
Use Case Name:	Doctors can delete a patient's profile on the web application.
Actor:	Doctors
Description:	Doctors delete a patient's profile from the database.
Trigger:	Doctor selects 'delete' button on the options column of table.
Pre-conditions:	<ol style="list-style-type: none"> 1. Doctors need to log in by using the doctor's side. 2. Doctors access to manage patients page
Post-condition:	System deletes a patient's profile from the database.
Normal Flows:	<ol style="list-style-type: none"> 1. System displays an alert message "Are you sure you want to delete this item?" with 'Ok' button and 'Cancel' button. 2. Doctors select 'Ok' button. 3. System deletes the patient's profile from the database. 4. System displays a list of patient's profile.
Alternative Flows:	4(A). <ol style="list-style-type: none"> 1. Doctors select 'Cancel' button. 2. System works on the 4th step of normal flows.
Exceptions:	N/A

Activity Diagram :(AD-04)

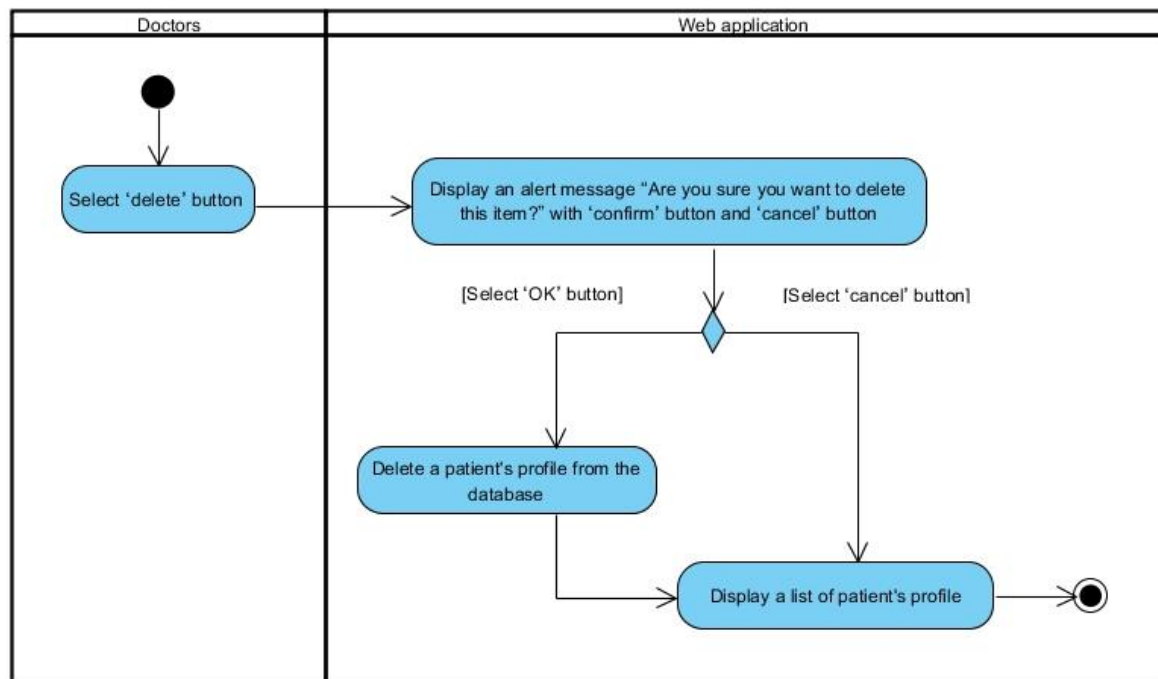

Figure-11: Activity Diagram AD-4

UC-05: Doctors can search a patient's profile on the web application by using personal id, name, and surname.

Use Case ID		UC-05	
Use Case Name:		Doctors can search a patient’s profile on the web application by using personal id, name, or surname.	
Actor:		Doctors	
Description:		Doctors search a patient’s profile by input by using personal id, name, or surname.to the search field.	
Trigger:		Doctors select ‘Search’ button.	
Pre-conditions:		1. Doctors need to log in by using doctor's side. 2. Doctors access to manage patients page	
Post-condition:		System displays a patient’s profile that match with a keyword search from the database.	
Use case input			
Input	Type	Constraint	Example of information
Keyword	String	String of alphabet	Natthakan
Normal Flows:		1. Doctors input a keyword search (personal id, name, or surname) to the search field. 2. Doctors select ‘search’ button. 3. System verifies a keyword search. 4. System retrieves a patient’s profile from the database that match with a keyword search. 5. System displays a patient’s profile.	
Alternative Flows:		3(A). 1. System displays a message “No results found” if there are no data that match with a keyword search in the database.

UC-07: Doctors can view a list of patient's profile on the web application.

Use Case ID	UC-07
Use Case Name:	Doctors can view a list of patient's profile on the web application.
Actor:	Doctors
Description:	Doctors view a list of patient's profile.
Trigger:	Doctors select 'Manage Patients' button on the patient options menu box.
Pre-conditions:	Doctors need to log in by using the doctor's side.
Post-condition:	Doctors view a list of patient's profile.
Normal Flows:	1. System provides a list of patient's profile.
Exceptions:	System does not display a list of patient's profile if there is no a patient's profile in the database.

Activity Diagram:(AD-07):

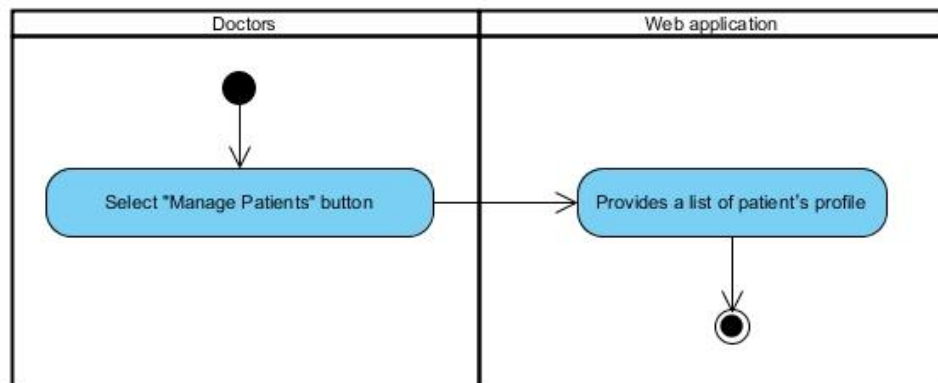

Figure-14: Activity Diagram AD-7

4.2.2 Feature#2: Account management system

UC-08 Administration can view an administration home page on the web application.

Use Case ID	UC-08
Use Case Name:	Administrator can view an administration home page on the web application.
Actor:	Administrator
Description:	Administrator can view an administration home page on the web application after login successful.
Trigger:	Administrator log in to the web application by using the administration's side.
Pre-conditions:	<ol style="list-style-type: none">1. Administrator already has the administrator profile.2. Administrator already login to the web application.
Post-condition:	Administrator can view the information of administrator's profile on home page.
Normal Flows:	<ol style="list-style-type: none">1. Systems provide the information of Administrator's profile on the home page.

Activity Diagram :(AD-08):

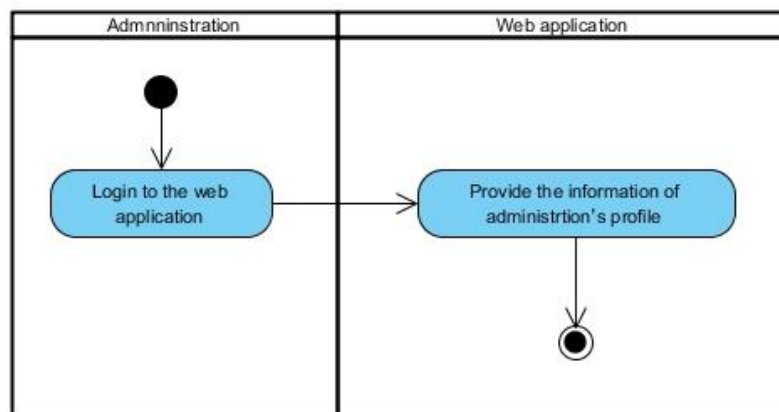

Figure-15: Activity Diagram AD-8

Document Name	Smart Prescription Application	Owner	Natthakan Kaeokanpai, Phithiwat Sitthitun	Page	36
Document Type	Software Requirement Specification	Release Date	July 30 th , 2016	Print Date	July 30 th , 2016

UC-09: Administrators can create a user's profile on the web application by inputting name, surname, password, confirm-password and position.

Use Case ID		UC-09	
Use Case Name:		Administrator can create a user’s profile on the web application by inputting name, surname, password, confirm-password and position.	
Actor:		Administrator	
Description:		Administrator creates a user’s profile to the database by inputting name, surname, password, confirm-password and position.	
Trigger:		Administrator select ‘Create User’ button.	
Pre-conditions:		Administrator log in by using the administration’s side.	
Post-condition:		System displays a user’s profile.	
Use case input			
Input	Type	Constraints	Example
position	Int	Number 1 digit	2
name	String	Alphabetic 30 digits	Natthakan
surname	String	Alphabetic 30 digits	Kaeokanpai
username	String	Alphabetic or number 20 digits	Up2man
password	String	Alphabetic or number 20 digits	7885
password2	String	Alphabetic or number 20 digits	7885
Normal Flows:		1. Administrators input the information of user’s profile. 2. Administrators select ‘create’ button. 3. System verifies a user create form. 4. System creates a user’s profile to database. 5. System displays a user’s profile.	
Alternative Flows:		3(A). 1. If administrators did not input the name field. 2. System displays error message “Name cannot be blank”. 3. System works on the 5 th step of normal flows. 3(B). 1. If administrators did not input the surname field. 2. System displays error message “Surname cannot be blank”. 3. System works on the 5 th step of normal flows. 3(C). 1. If administrators did not input the username field. 2. System displays error message “Username cannot be blank”. 3. System works on the 5 th step of normal flows. 3(D). 1. If administrators input the username of the patient’s profile that already exist in the database. 2. System displays error message “Username has already been taken. Please change”. 3. UC-10: Administrators can update a user's profile on the web application by inputting name, surname, password, confirm-password and position.

Use Case ID		UC-10	
Use Case Name:		Administrators can update a user’s profile on the web application by inputting name, surname, password, confirm-password and position.	
Actor:		Administrators	
Description:		Administrators update a user’s profile to the database by inputting name, surname, password, confirm-password and position.	
Trigger:		Administrators select ‘Update’ button on the options column of table.	
Pre-conditions:		1. Administrators log in by using the administration’s side. 2. Administrators access to manage user page.	
Post-condition:		Administrations view a user’s profile.	
Use case input			
Input	Type	Constraints	Example
position	Int	Number 1 digit	2
name	String	Alphabetic 30 digits	Natthakan
surname	String	Alphabetic 30 digits	Kaeokanpai
username	String	Alphabetic or number 20 digits	Up2man
password	String	Alphabetic or number 20 digits	7885
password2	String	Alphabetic or number 20 digits	7885
Normal Flows:		1. Administrations input the information of user’s profile. 2. Administrations select ‘Update’ button. 3. System verifies a user update form. 4. System saves a user’s profile to database. 5. System displays a user’s profile.	
Alternative Flows:		3(A). 1. If administrators did not input the name field. 2. System displays error message “Name cannot be blank”. 3. System works on the 5 th step of normal flows. 3(B). 1. If administrators did not input the surname field. 2. System displays error message “Surname cannot be blank”. 3. System works on the 5 th step of normal flows. 3(C). 1. If administrators did not input the username field. 2. System displays error message “Username cannot be blank”. 3. System works on the 5 th step of normal flows. 3(D). 1. If administrators input the username of the patient’s profile that already exist in the database. 2. System displays error message “Username has already been taken. Please change”. 3. System works on the 5 th step of normal flows. 3(E). 1. If administrators did not input the password field. 2. System displays error message “Password cannot be blank”. 3. System works on the 5 th step of normal flows. 3(F). 1. If administrators did not input the confirm-password field. 2. System displays error message “Con-firm password cannot be blank”. 3. System works on the 5 th step of normal flows.	

	3(G). 1. If administrators did not input the confirm-password field. 2. System displays error message “Password and Con-firm password do not match”. 3. System works on the 5 th step of normal flows. 3(H). 1. If administrators input the name not follow by the constraints on the table. 2. System displays error message “Name is invalid”. 3. System works on the 5 th step of normal flows. 3(I). 1. If administrators input the surname not follow by the constraints on the table. 2. System displays error message “Surname is invalid”. 3. System works on the 5 th step of normal flows. 3(J). 1. If administrators did not input the position field. 2. System displays error message “Position cannot be blank”. 3. System works on the 5 th step of normal flows.

4.2.3 Feature#3: Authentication system

UC-15: Doctors, Administrators, and FDAs can login to the web application.

Use Case ID		UC-15	
Use Case Name:		Doctors, Administrators, and FDAs can login to the web application.	
Actor:		Doctors, Administrators, or FDAs	
Description:		Users login to the web application by use the username and password.	
Trigger:		Users select ‘login’ button on the menu bars.	
Pre-conditions:		1. Users access to the web application 2. Users already have the username and password.	
Post-condition:		System provides the home page after login completed.	
Use case input			
Input	Type	Constraints	Example of information
Username	String	Alphabet or number 20 digits	taksin
Password	String	Alphabet or number 20 digits	1234
Normal Flows:		1. Users input the username and password to the login form. 2. Users select ‘login’ button on the login form. 3. System verifies the username and password. 4. System redirects the users to the home page.	
Alternative Flows:		3(A). 1. System displays the error box message “Username is Incorrect!” if users input the username incorrectly. 2. System works on the 4 th step in normal flows. 3(B). 1. System displays the error box message “Password is Incorrect!” if users input the password incorrectly. 2. System works on the 4 th step in normal flows. 3(C). 1. System displays the error box message “Username cannot be blank.” if users do not input the username. 2. System works on the 4 th step in normal flows. 3(D). 1. System displays the error box message “Password cannot be blank “if users do not input the password. 2. System works on the 4 th step in normal flows.	
Exceptions:		N/A

4.2.5 Feature#5: Allergy report system

UC-22: Doctors can create an allergy reports on the web application by inputting personal id, name, surname and allergy drug.

Use Case ID		UC-22	
Use Case Name:		Doctors can create an allergy reports on the web application by inputting personal id, name, surname, and allergy drug.	
Actor:		Doctors	
Description:		Doctors create an allergy reports to the database by inputting personal id, name, surname, and allergy drug on the allergy report form.	
Trigger:		Doctors select ‘Create Allergy Report’ button on the allergy options menu box.	
Pre-conditions:		Doctor log in by using the doctor's side.	
Post-condition:		System displays an allergy report.	
Use case input			
Input	Type	Constraints	Example
personal ID	Int	Number 13 digits	1600100485726
name	String	Alphabetic 30 digits	Natthakan
surname	String	Alphabetic 30 digits	Kaeokanpai
allergy report	String	Alphabetic or number 300 digits	Parasetamol
Normal Flows:		1. Doctors input the information of allergy report. 2. Doctors select ‘Create’ button. 3. System verifies an allergy report create form. 4. System store name of reporter and created date time. 5. System creates an allergy report to database. 6. System displays an allergy report.	
Alternative Flows:		3(A). 1. If doctors did not input the personal id field. 2. System displays error message “Personal ID cannot be blank”. 3. System works on the 6 th step of normal flows. 3(B). 1. If doctors input the personal id of the patient’s profile that already exist in the database. 2. System displays error message “Personal ID has already been exist”. 3. System works on the 6 th step of normal flows. 3(C). 1. If doctors input the personal id that not follow by the constraints on the table. 2. System displays error message “Personal ID is invalid”. 3. System works on the 6 th step of normal flows. 3(D). 1. If doctors did not input the name field. 2. System displays error message “Name cannot be blank”. 3. System works on the 6 th step of normal flows. 3(E). 1. If doctors did not input the surname field. 2. System displays error message “Surname cannot be blank”.

UC-23: Doctors can update an allergy report on the web application inputting personal id, name, surname and allergy drug.

Use Case ID		UC-23	
Use Case Name:		Doctors can update an allergy report on the web application inputting personal id, name, surname and allergy drug.	
Actor:		Doctors	
Description:		Doctors update an allergy report by change the default report to a new reports (name, surname, personal ID, and allergy drug of the allergy report).	
Trigger:		Doctors select 'Update' button on the options column of table.	
Pre-conditions:		Doctors have to create an allergy report before updating.	
Post-condition:		Doctors can view a new allergy report on the list of allergy report list.	
Use case input			
Input	Type	Constraints	Example
personal ID	Int	Number 13 digits	1600100485726
name	String	Alphabetic 30 digits	Natthakan
surname	String	Alphabetic 30 digits	Kaeokanpai
allergy report	String	Alphabetic or number or symbol	Parasetamol
Normal Flows:		1. Doctors input the information of allergy report. 2. Doctors select 'save' button. 3. System verifies an allergy report update form. 4. System store name of reporter and updated date time. 5. System creates an allergy report to database. 6. System displays an allergy report.	
Alternative Flows:		3(A). 1. If doctors did not input the personal id field. 2. System displays error message "Personal ID cannot be blank". 3. System works on the 6 th step of normal flows. 3(B). 1. If doctors input the personal id of the patient's profile that already exist in the database. 2. System displays error message "Personal ID has already been exist". 3. System works on the 6 th step of normal flows. 3(C). 1. If doctors input the personal id that not follow by the constraints on the table. 2. System displays error message "Personal ID is invalid". 3. System works on the 6 th step of normal flows. 3(D). 1. If doctors did not input the name field. 2. System displays error message "Name cannot be blank". 3. System works on the 6 th step of normal flows. 3(E). 1. If doctors did not input the surname field. 2. System displays error message "Surname cannot be blank". 3. System works on the 6 th step of normal flows. 3(F). 1. If doctors did not input the allergy drug field. 2. System displays error message "Allergy drug cannot be blank".	

	3. System works on the 6 th step of normal flows. 3(I). 1. If doctors input the name not follow by the constraints on the table. 2. System displays error message “Name is invalid”. 3. System works on the 6 th step of normal flows. 3(J). 1. If doctors input the surname not follow by the constraints on the table. 2. System displays error message “Surname is invalid”. 3. System works on the 6 th step of normal flows.
